Thanks Chris,

I'll make the TAT change from seven to 21 days, hopefully this will assist in procuring a laboratory assignment this week.

I'll provide an update as soon as possible.

Good Afternoon [redacted]

I'm sorry for not getting back to you yesterday. The attachments would not load to my phone.

The samples were collected today because they are from an area which needs to be backfilled asap.

However, these should be considered waste samples rather than environmental samples b/c air monitoring readings are in the ppm range. Therefore, we are not concerned about CRQLS. In fact, the lab should be notified that results are expected in mg/kg range — not ug/kg

We also do not need 7 day turnaround for this set of samples. Normal TAT is acceptable

With these factors in mind, I am open to your recommendations

Thank you
Chris
